

ОТДЕЛ ТРЕКОВЫХ ДЕТЕКТОРОВ ОФВЭ ПИЯФ

А.Г.Крившич

26 декабря 2007 г.

Состав отдела

| | |
|---------------------|----------|
| Научных сотрудников | - 4 чел. |
| Ведущих инженеров | - 3 чел. |
| Старших инженеров | - 1 чел. |
| Рабочих | - 5 чел. |
| Студентов | - 2 чел. |

Основные направления работы ОТД в 2007 г.

1. Проект ТОТЕМ.

2. Исследование процессов развития старения и стиммерных разрядов в детекторах частиц, работающих в пучках высокой интенсивности.

3. Детектор тепловых нейтронов

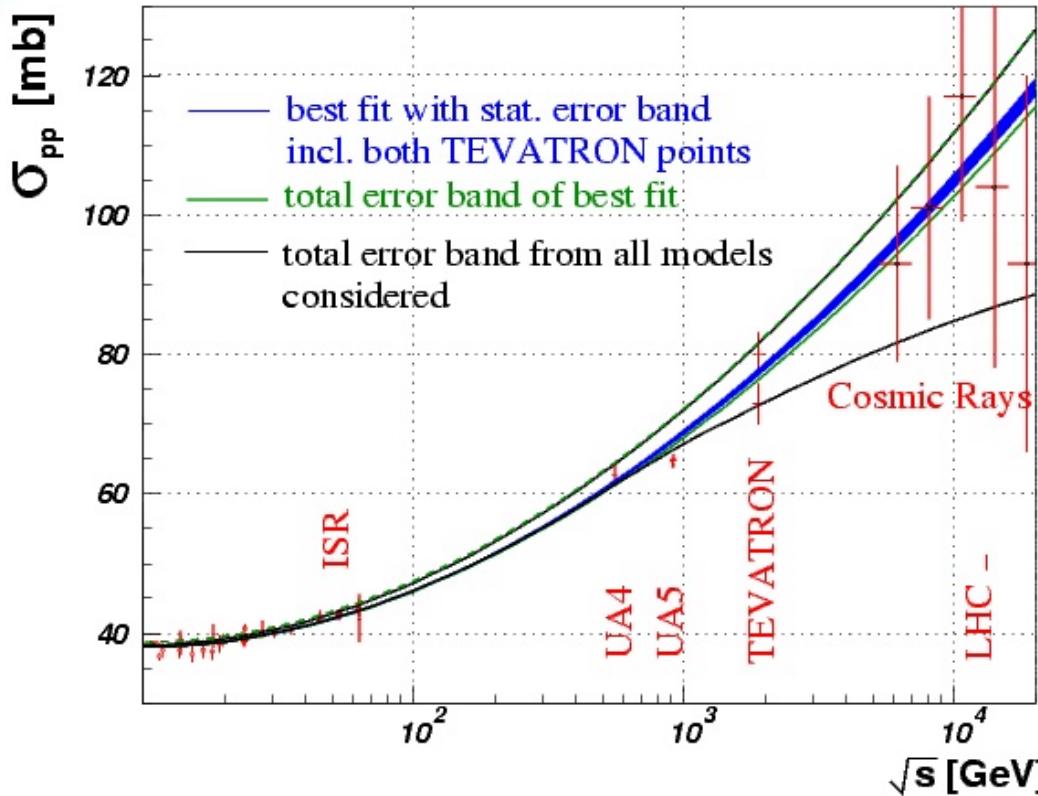

4. Эксперимент В.В.Сумачева.

TOTEM

1. Measurement of the total pp cross-section.
2. Study of elastic proton scattering over a wide range in momentum transfer up to
 $(-t) \approx 10\text{GeV}^2$
3. Measurement of the inelastic pp interaction in the forward region.

TOTEM Physics: Total p-p Cross-Section

- Current models predictions: 90-130 mb
- Aim of TOTEM: **~1%** accuracy

Prediction for LHC

$$\sigma_{tot} = 111.5 \pm 1.2 \begin{array}{l} + 4.1 \\ - 2.1 \end{array} \text{ mb}$$

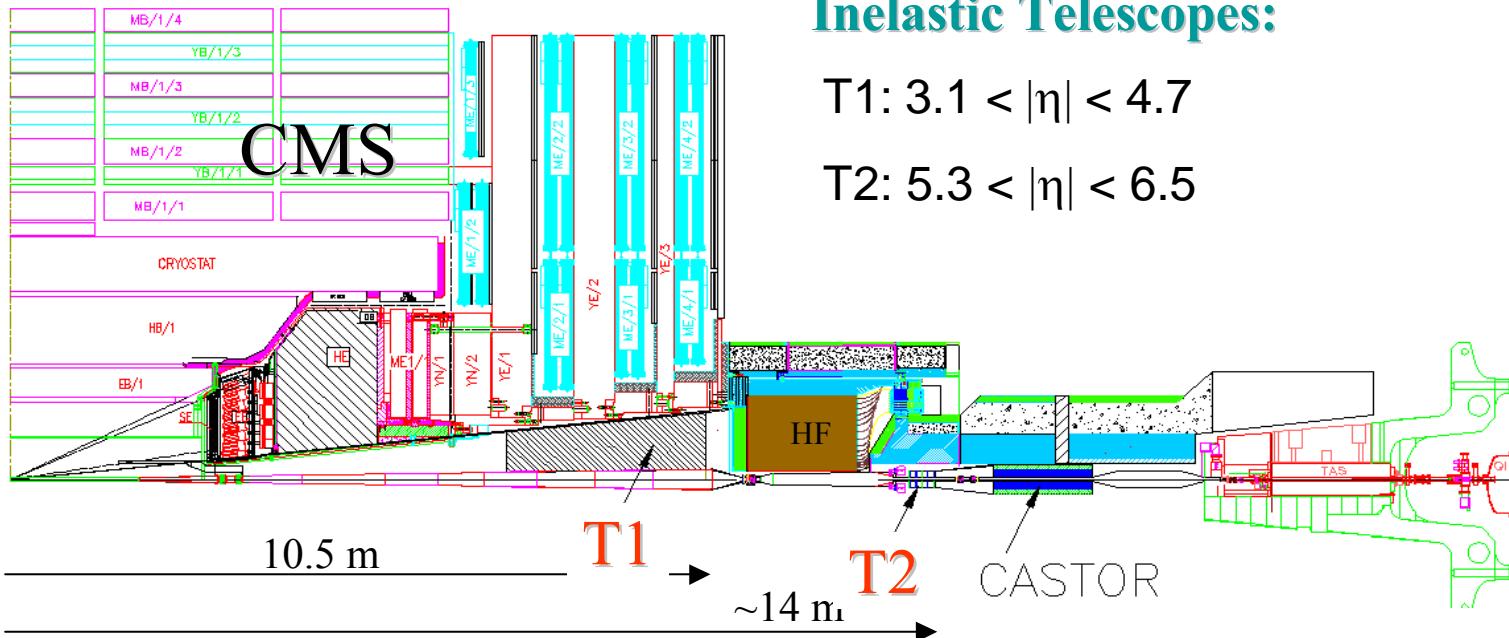

$$L\sigma_{tot}^2 = \frac{16\pi}{1+\rho^2} \times \left. \frac{dN}{dt} \right|_{t=0}$$

Optical Theorem

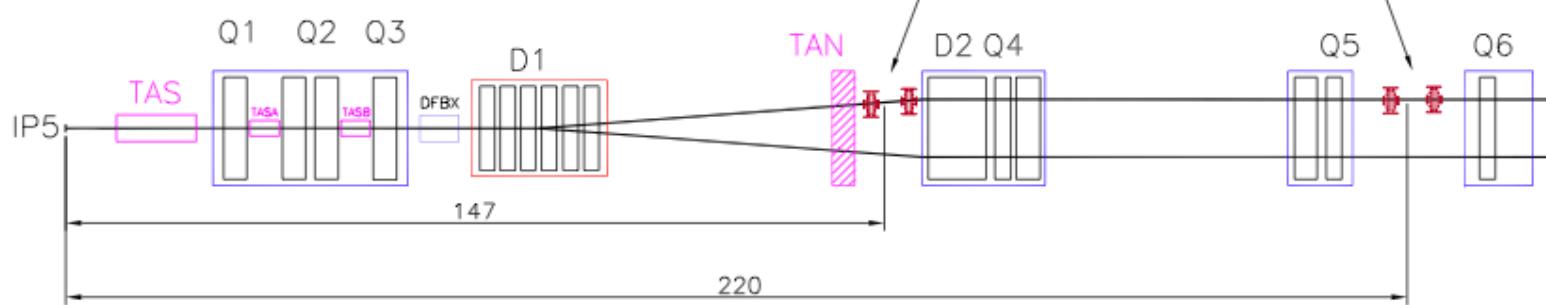

$$L\sigma_{tot} = N_{elastic} + N_{inelastic}$$

$$\sigma_{tot} = \frac{16\pi}{1+\rho^2} \times \frac{(dN/dt)|_{t=0}}{N_{el} + N_{inel}}$$

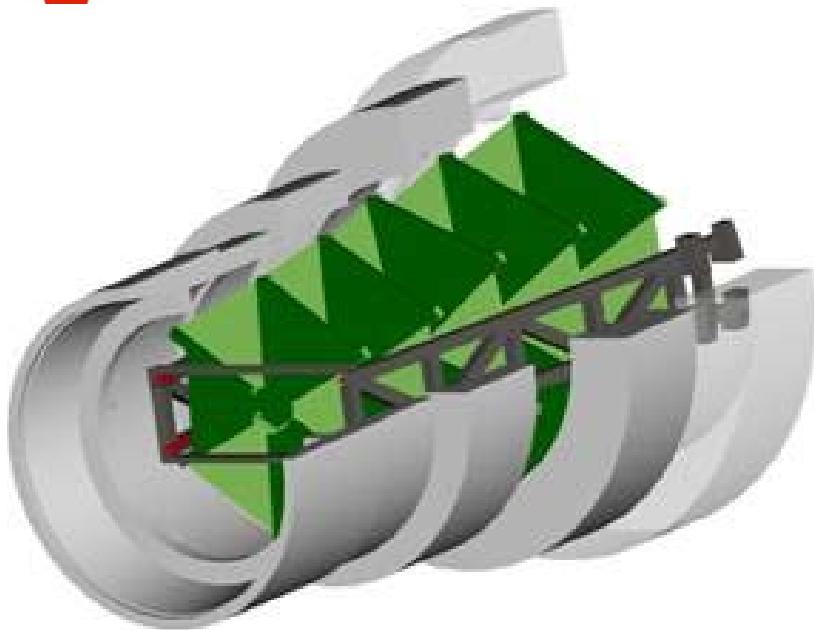

The TOTEM Detectors

Roman Pots:

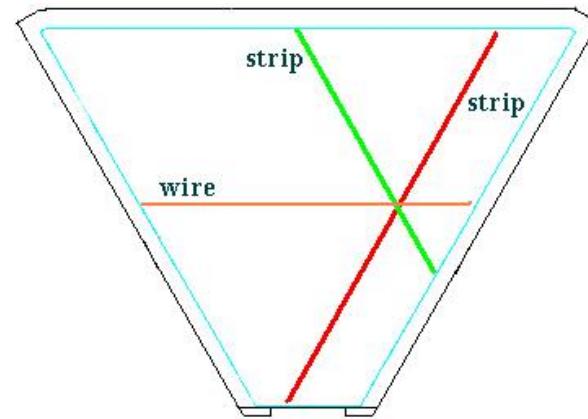

General Structure and Chamber Design

- Each plane made up of 6 independent trapezoidal CSC:
 - overlapping edges to have complete azimuthal coverage;
 - planes slightly rotated with respect to each other

- Two symmetric arms, each with five planes of multi-wire proportional chambers with cathode strip read-out (CSC)
 - split in two half-arms, independently sliding on the support structure

Total number of wires per half-arm: ~ 2500
Total number of strips (both views) per half-arm: ~ 4050

Chamber production at PNPI

Wiring

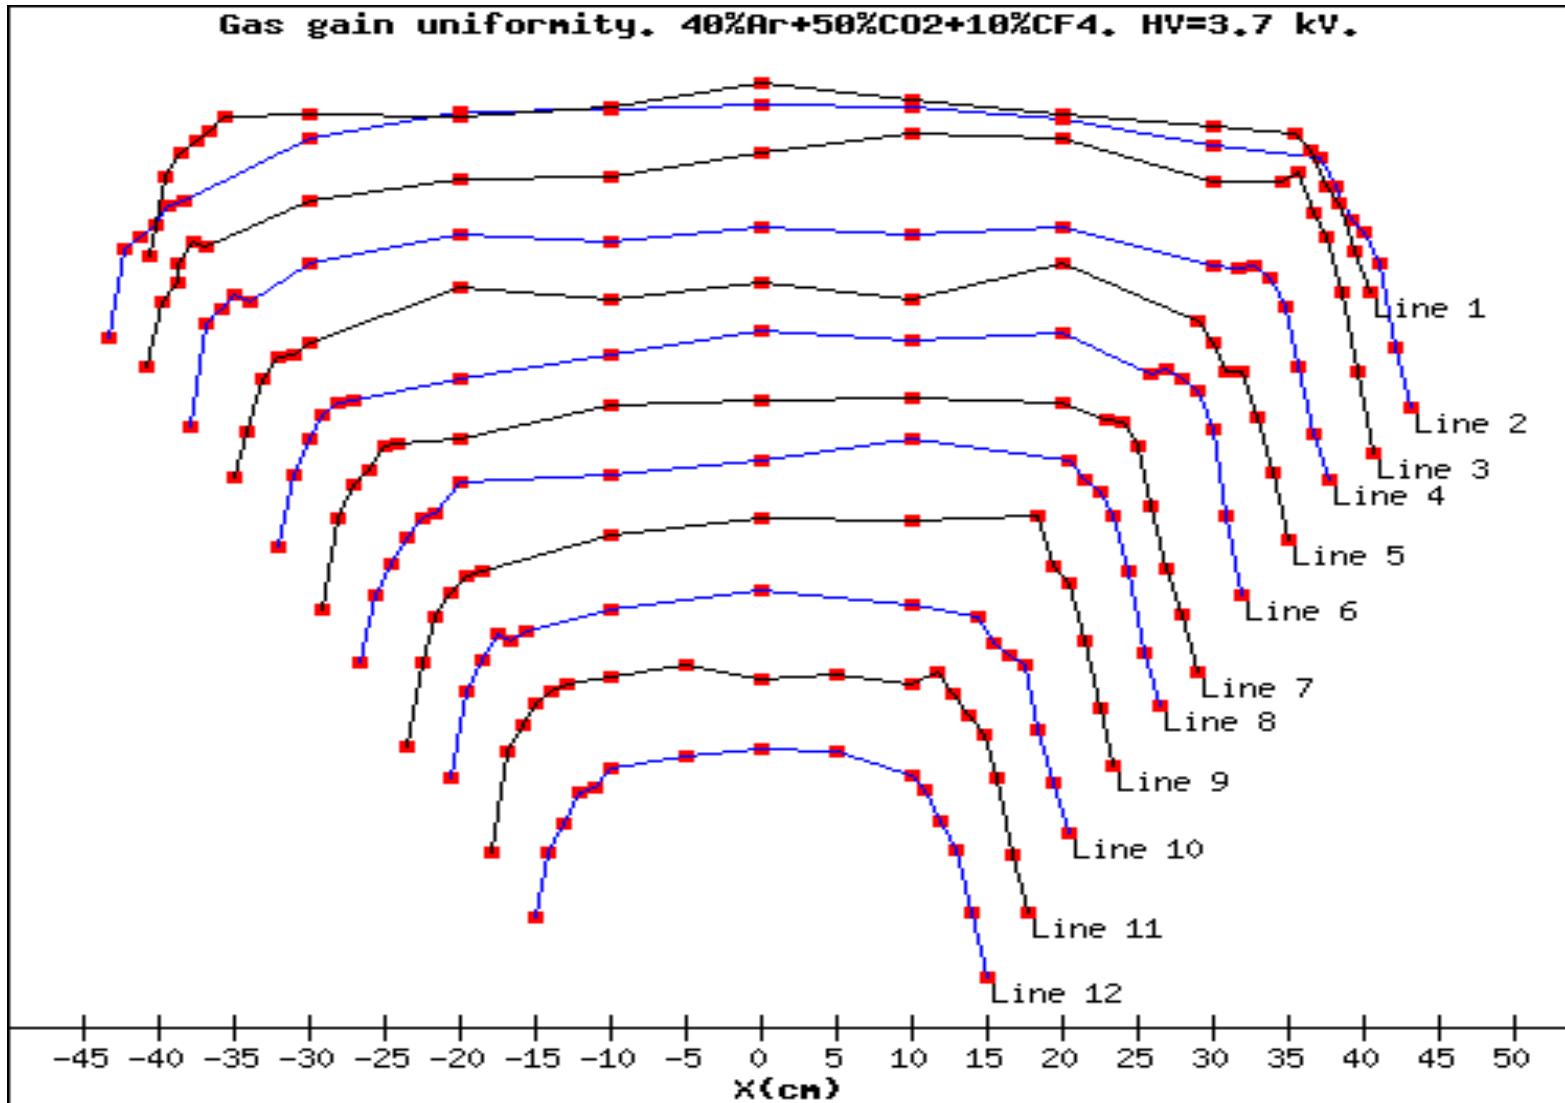

Chamber production at PNPI

Test set-up with temporary sealed chamber

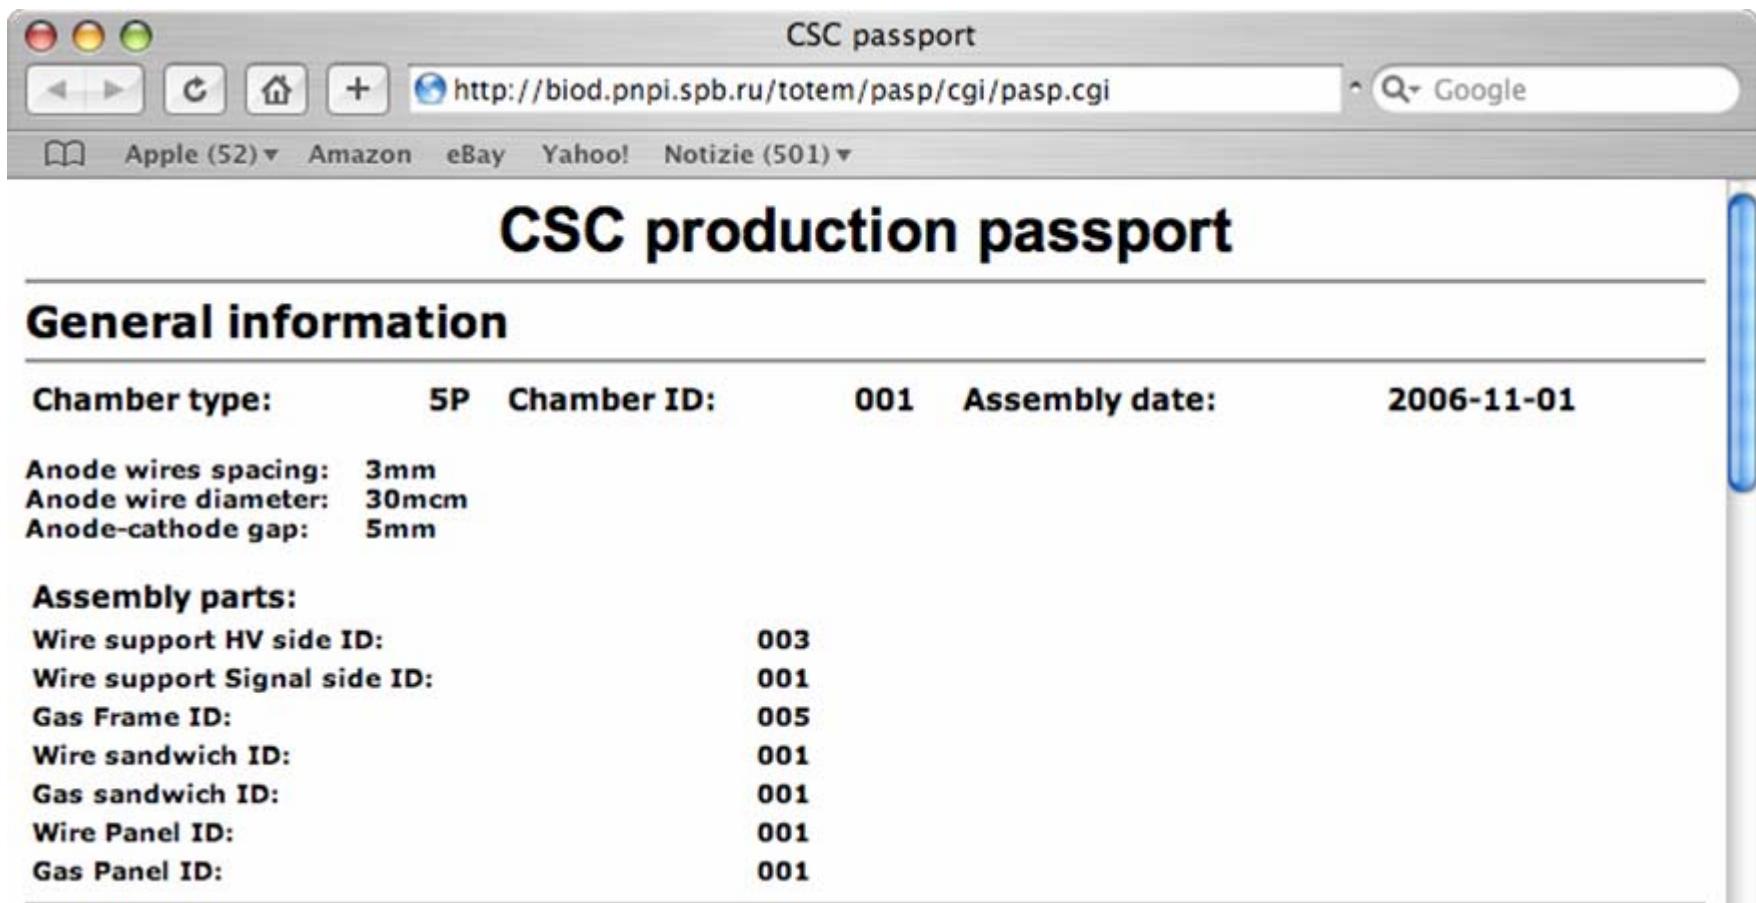

CSC gas gain uniformity

Production database

- All results of quality controls and measurements for each chamber are stored in a database. Data will be made available through a web interface:
[example page](http://biod.pnpi.spb.ru/totem/pasp/cgi/pasp.cgi) (in the works)

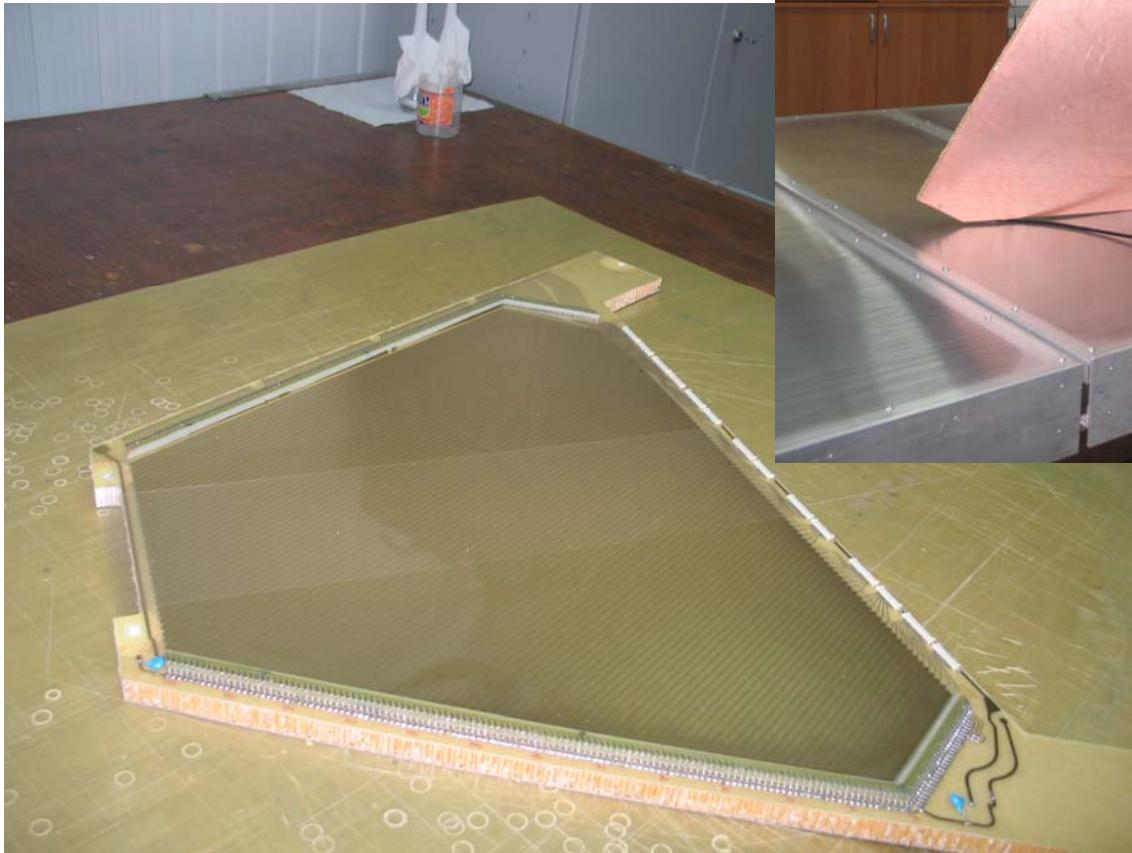

The screenshot shows a web browser window with the title "CSC passport". The address bar contains the URL <http://biod.pnpi.spb.ru/totem/pasp/cgi/pasp.cgi>. Below the address bar, there is a toolbar with various icons and a search bar with the text "Google". The main content area of the browser displays the "CSC production passport" page. The page has a header "CSC production passport" and a section titled "General information". Under "General information", there is a table with the following data:

| | | | | | |
|---------------|----|-------------|-----|----------------|------------|
| Chamber type: | 5P | Chamber ID: | 001 | Assembly date: | 2006-11-01 |
|---------------|----|-------------|-----|----------------|------------|

Below this, there is a section titled "Assembly parts:" with a table listing various components and their IDs:

| | |
|------------------------------|-----|
| Wire support HV side ID: | 003 |
| Wire support Signal side ID: | 001 |
| Gas Frame ID: | 005 |
| Wire sandwich ID: | 001 |
| Gas sandwich ID: | 001 |
| Wire Panel ID: | 001 |
| Gas Panel ID: | 001 |

CSC production status

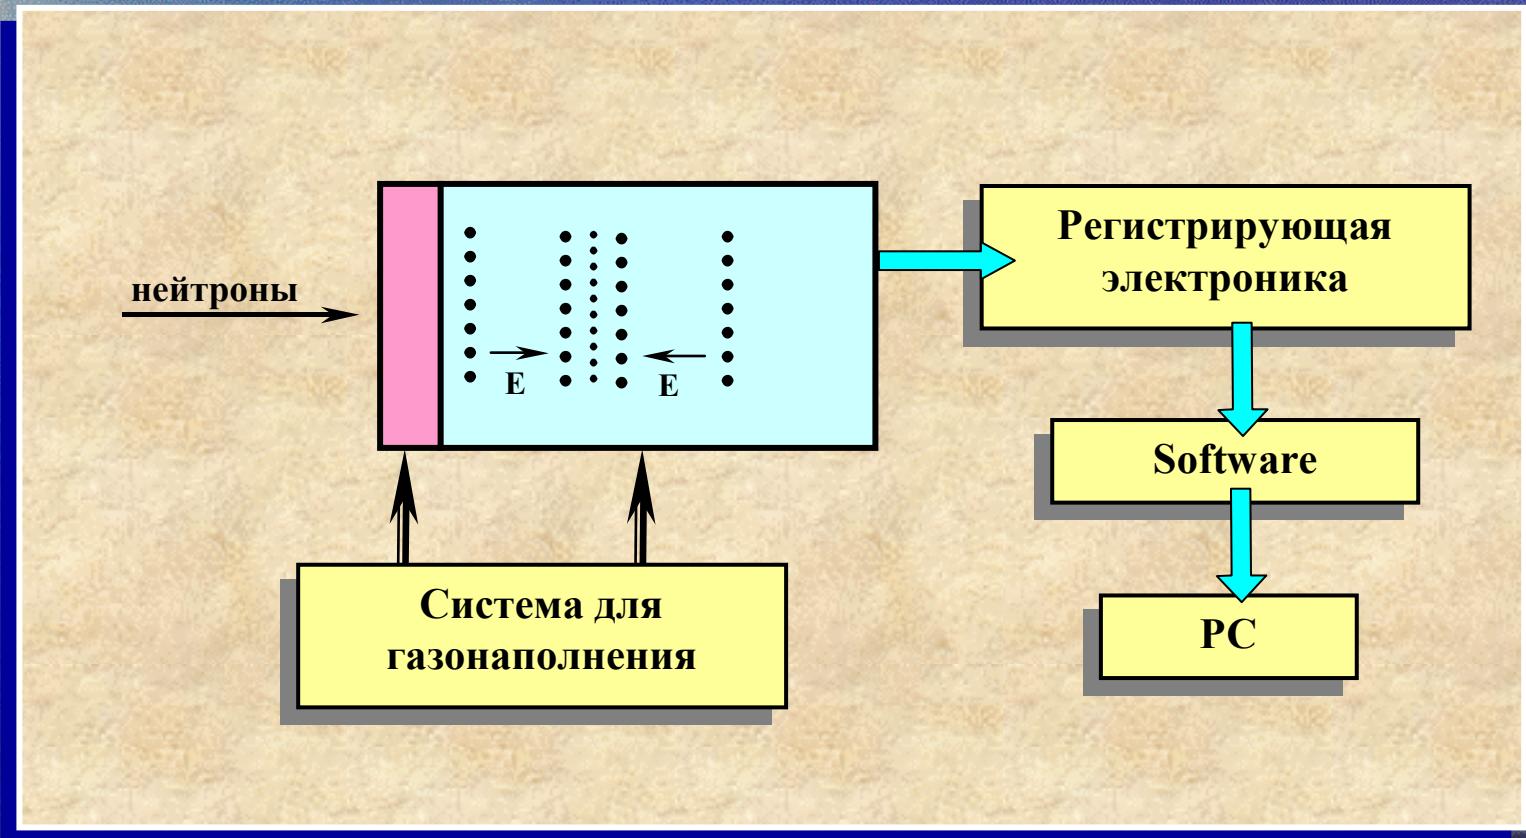

Состояние дел с обязательствами ПИЯФ в проекте TOTEM

34 CSC уже находятся в ЦЕРНе.

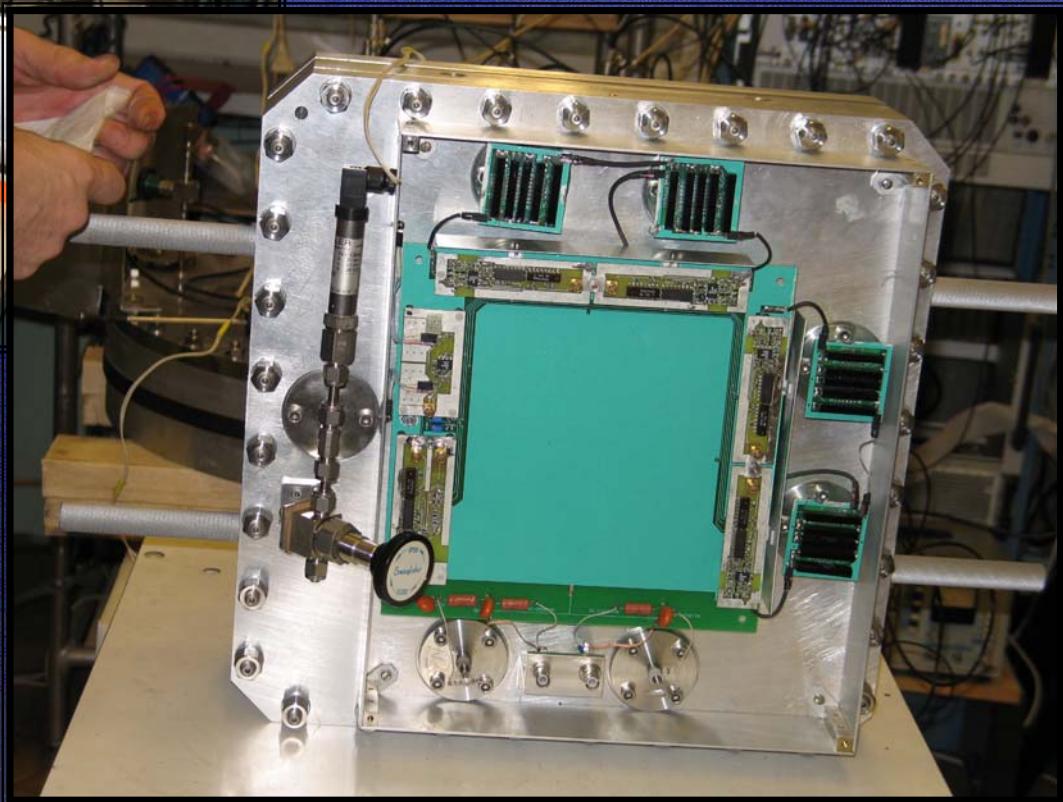

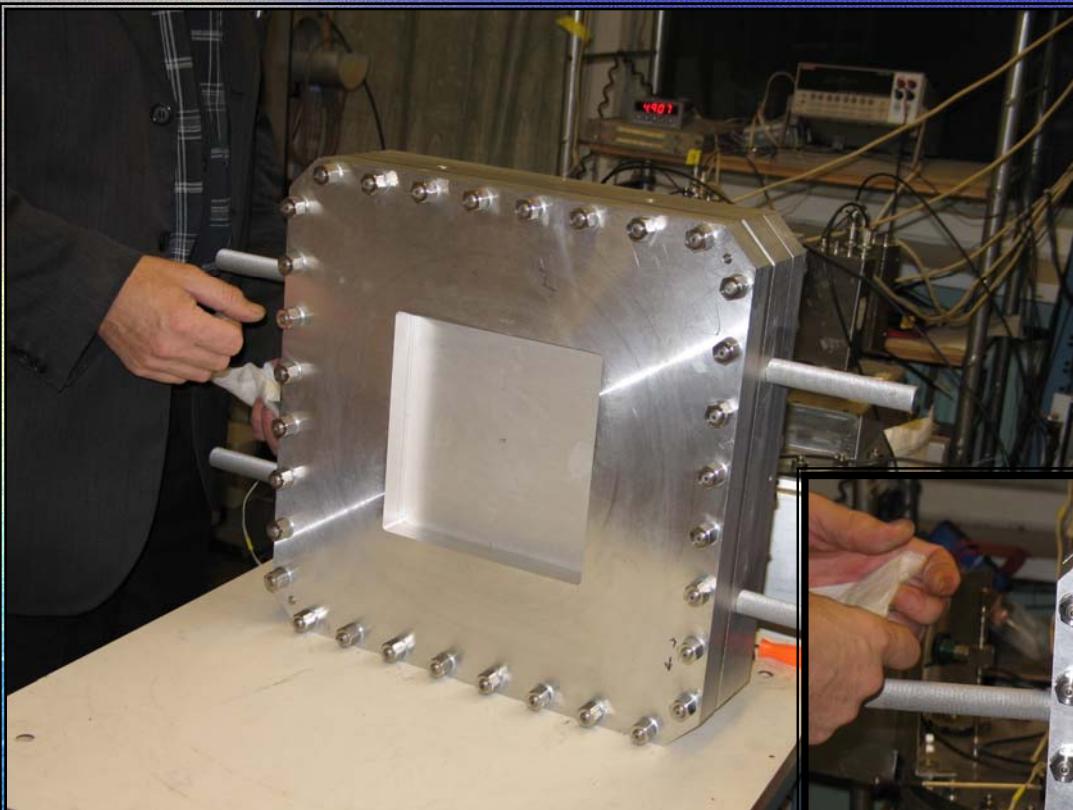

36 CSC еще надо будет сделать в 2008 году.

Монтаж и установка телескопа T1 намечена на май-июнь 2008 года.

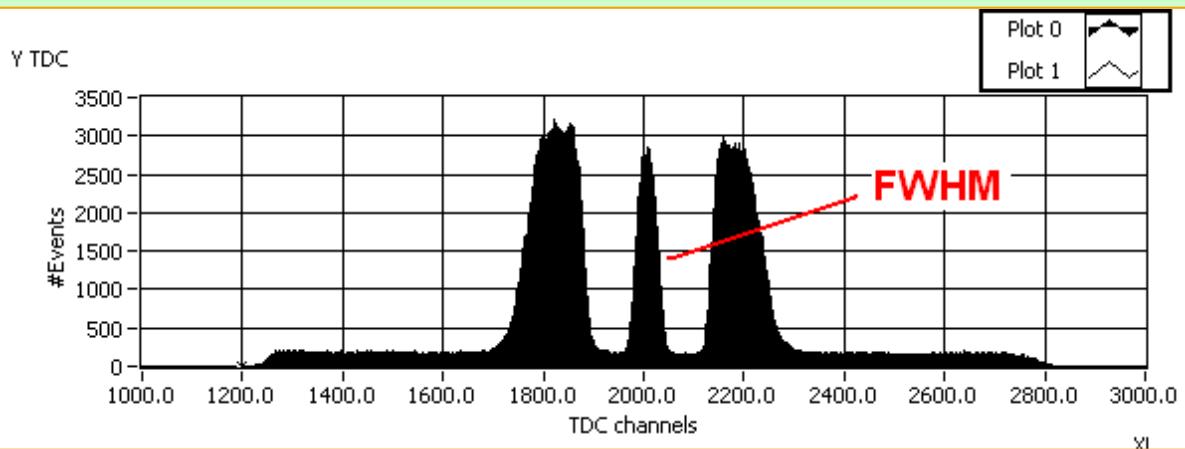

Нейтронный детектор.

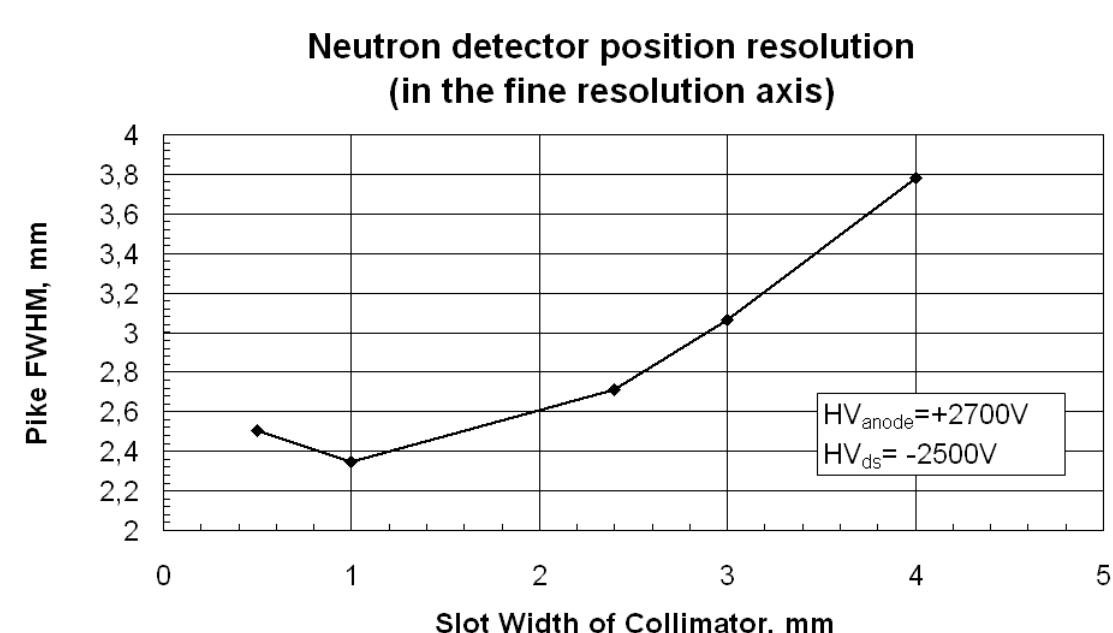

Рабочий экземпляр детектора тепловых нейтронов

Position resolution measurement (one point)

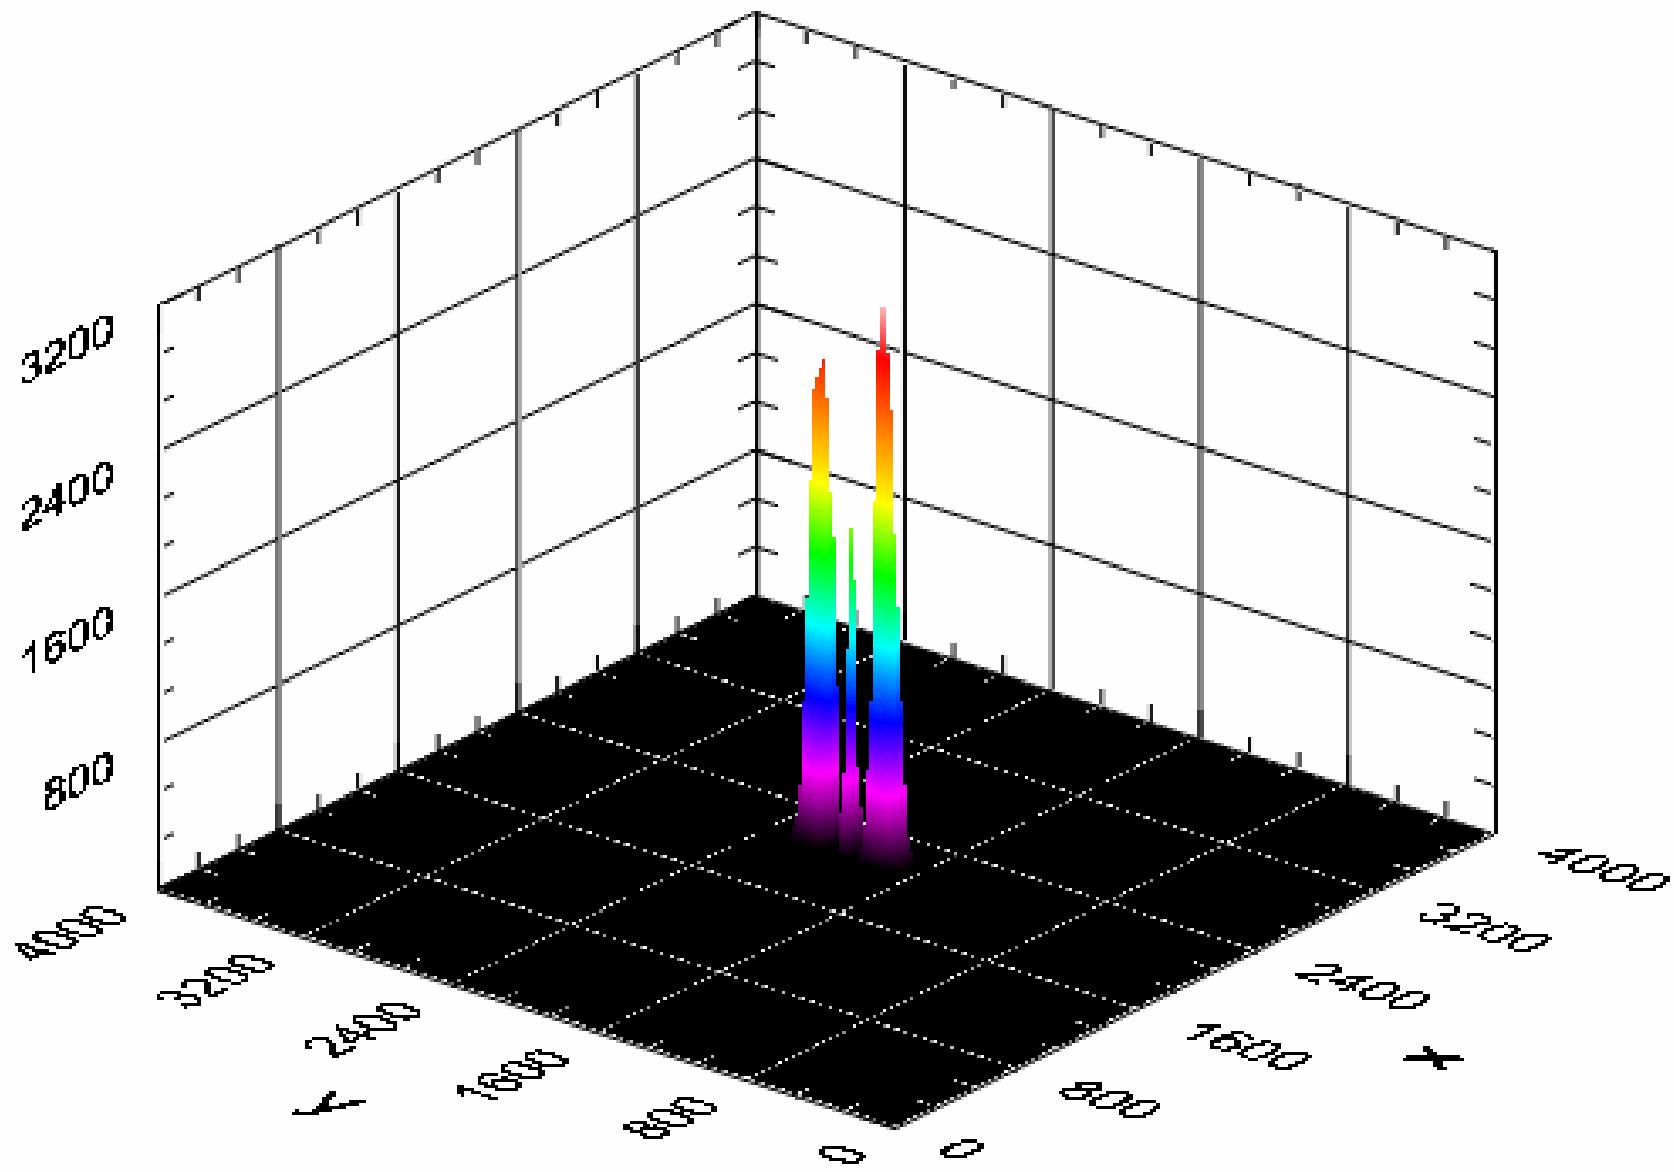

The pike in the fine resolution axis obtained by narrow (4mm) thermal neutron beam.

The neutron pike width stay constant after 2.4mm-collimator.

So,

FWHM is about 2.5mm

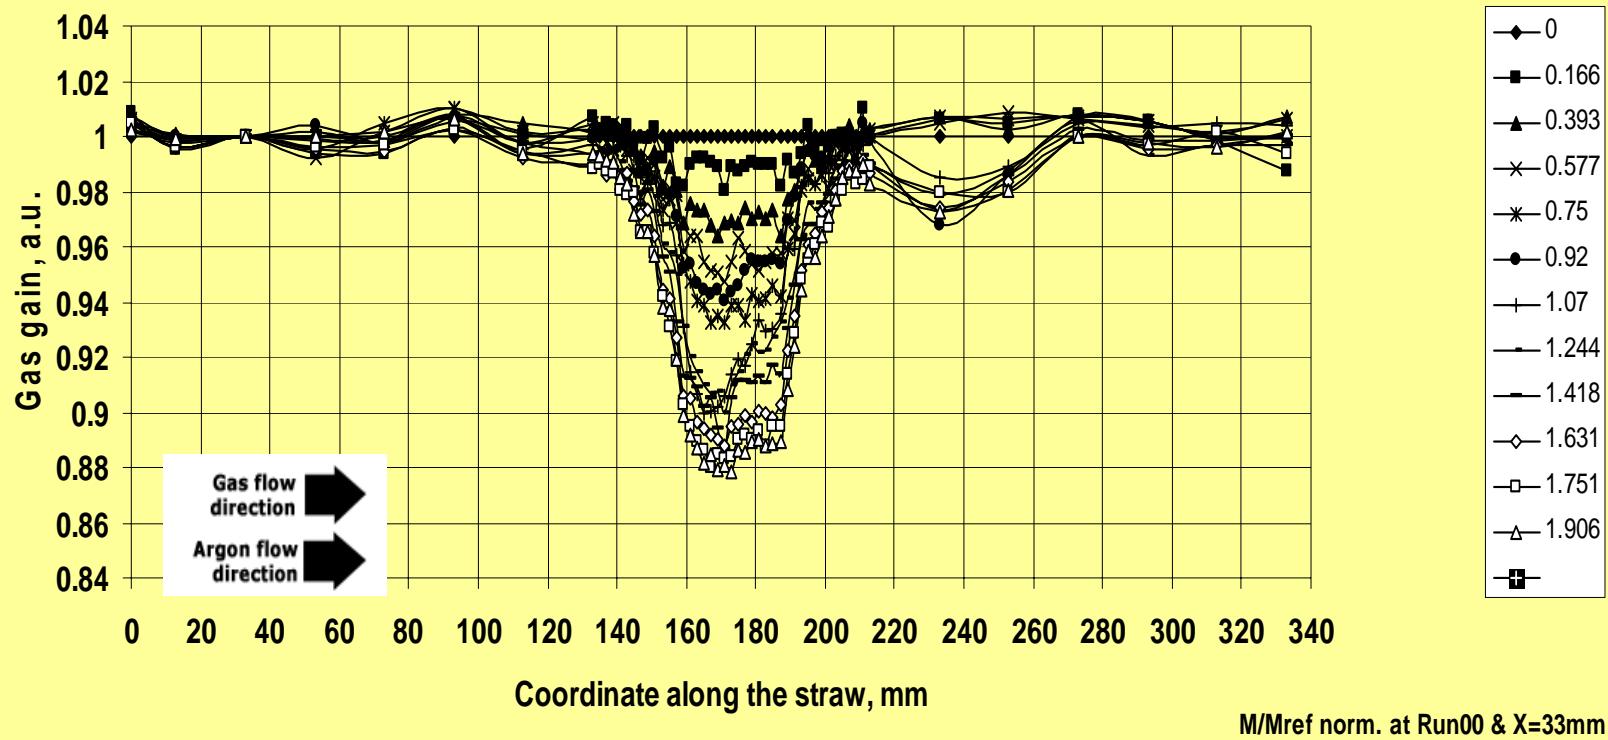

Старение детекторов частиц в интенсивных радиационных полях

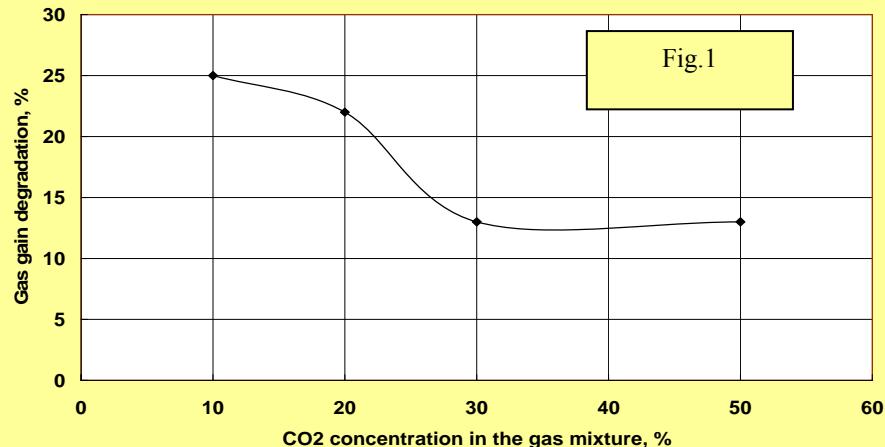

**Task 34. Relative gas gain distribution along the straw
for different accumulated dose.**

Ar+20%CO₂+10%CF₄, Wire diameter - 35mcm, FWHM=34mm, Right straw, HV=1687 V

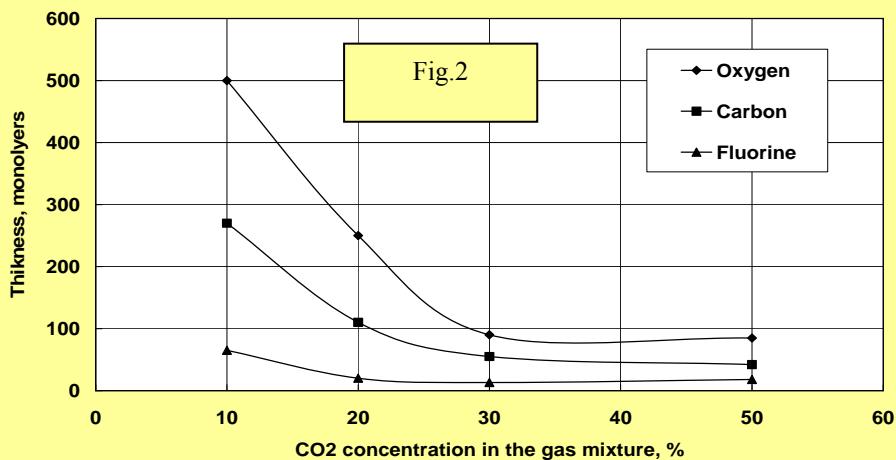

14.12.05 - 27.12.05

Gas gain degradation after the charge accumulation of 1.7 C/cm
for different concentration of CO₂ in the gas mixture Ar+CO₂+10%CF₄.
Gas gain is 100000.

Element's amount accumulated by anode wire after the charge accumulation of 1.7
C/cm for different concentration of CO₂ in the gas mixture Ar+CO₂+10%CF₄.
Gas gain is 100000.

Применение метода Ядерных Реакций для исследования содержания фтора при исследовании старения детекторов частиц

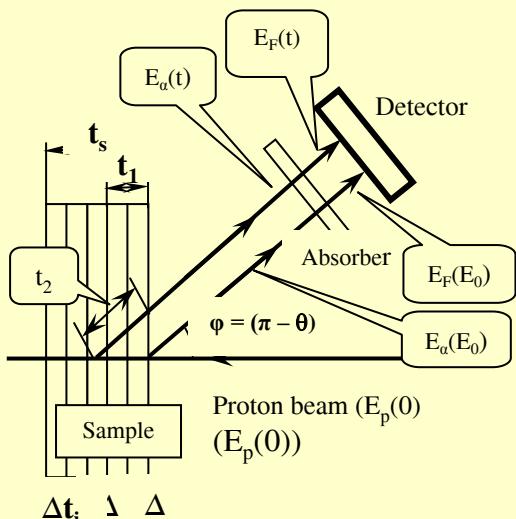

Fig. 1. Schematics and nomenclature for the (p,α) nuclear reaction process in sample.

$$E_p=1,25\text{MeB}; \quad E_\alpha=7\text{MeB}.$$

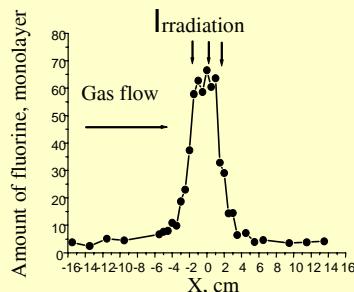

Fig. 2. The distribution of fluorine content along the wire. The element content of 1 monolayer is equal to 10^{15} at/cm².

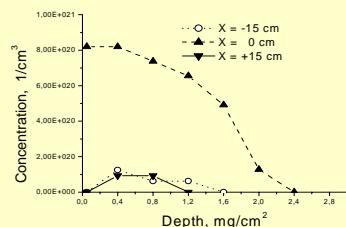

Fig. 3. The distribution of fluorine concentrations as a function of depth into the gold layer for different points along the wire.

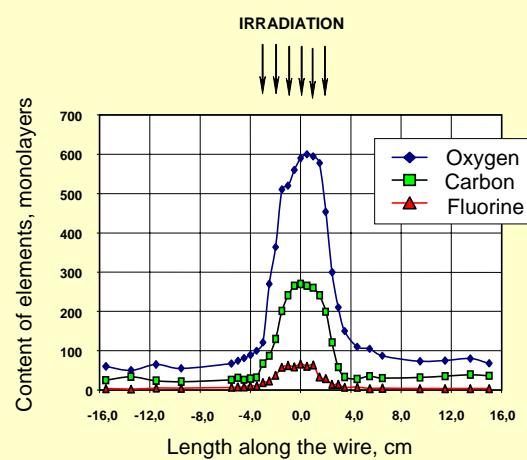

Fig.4. Distribution of element concentration along the wire.

Метод Ядерных Реакций позволил нам
впервые в мире измерить количественное
распределение как вдоль проволочки,
так и в ее глубину для
всех легких элементов,
содержащихся в газовых смесях,
применяемых в детекторах частиц.

Мы располагаем новым методом.

Ключевые публикации 2008 года.

- 1. Application of Nuclear Reaction Analysis for the fluorine content measurements under the aging investigations of gas-filled particle detectors,** Nucl. Instr. and Meth. A 581 (2007) 167-170.
- 2. Two-dimensional detector of thermal neutrons,** Nucl. Instr. and Meth. A 581 (2007) 123-127.
- 3. Исследование старения газоразрядных детекторов частиц методом ядерных реакций,** Известия РАН, серия физическая, 2007, том 71, №9, 1360-1366.

ОФВЭ, с Новым 2008 годом.

Нам 44 года - это время
молодости и силы.
