

2. Alpha-particle Energy and Intensity Standards

Table 2 lists some α -particle energy and intensity standards for calibration of α -particle measurements. The recommended energies were determined by Rytz¹ from an adjustment of experimental values to several absolute energy standards. The recommended α branching values¹ are weighted averages of values reported in the literature. The alpha sources selected for this table have half-lives longer than 1 d, and are presented, for each parent isotope, in order of decreasing α -particle energy. Columns 1 and 2 show the source names and half-lives, respectively. Column 3 lists the recommended α -particle energies, and column 4 shows the α -decay branching intensity per 100 parent α -decays, with the corresponding uncertainty (in italics) in the least significant digit(s).

¹A. Rytz, *At. Data and Nucl. Data Tables* **47**, 205 (1991).
